

PHOTON ENERGY INVESTMENTS N.V. CONSOLIDATED FINANCIAL REPORT

Q2 2013

for the period from 1 April to 30 June 2013

22 August 2013 | Amsterdam | Netherlands

CONSOLIDATED FINANCIAL REPORT

LETTER FROM THE MANAGEMENT

Dear Investors,

We are pleased to present you with our consolidated financial report for Q2 2013 including a description of the key performance drivers and events. During Q2 2013 we paid the first coupon on our corporate bond and continued our expansion into the Australian market.

With our quarterly reports we are following the same transparency standards as our parent Company Photon Energy NV, which in June 2013 went public through a listing on the New Connect segment of the Warsaw Stock Exchange. Throughout the Photon Energy Group we understand the importance of regular and open communication with our investors and are committed to maintaining the highest possible standards.

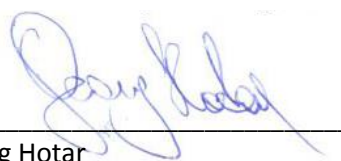

In the light of significant volatility on the German Mittelstand bond market we are very satisfied with the stable trading performance of our corporate bond with the majority of trades during the past months taking place above nominal value. We remain dedicated to strengthen investor perception of our Company as a reliable issuer with stable and planable cash flows.

Kind regards,

Amsterdam, 22 August 2013

Michal Gärtner
Member of the Management Board

Georg Hotar
Member of the Management Board

CONSOLIDATED FINANCIAL REPORT

1. SELECTED FINANCIAL RESULTS

Selected financial results for the period of 1 April to 30 June 2013

<i>in TEUR</i>	Q2 2013
Revenues	4 274
Gross Profit	2 978
EBITDA	3 251
EBIT	1 575
Profit / loss before taxation	891
Total comprehensive income	807
Non-current assets	89 457
Current assets	9 827
Cash and cash equivalents	4 616
Total assets	99 284
Total equity	39 242
Current liabilities	5 548
Non-current liabilities	54 494
Equity ratio¹	39%
Operating cash flow	778
Investment cash flow	0
Financial cash flow	-1 048
Net change in cash	-270

¹ Equity ratio is defined as total equity divided by total capital. As total capital the sum of interest-bearing debt capital and equity capital is used.

Financial highlights:

- Revenues reached EUR 4,274 thousand;
- EBITDA amounted to EUR 3,251 thousand;
- Profit before taxation came in at EUR 891 thousand;
- Equity amounted to EUR 39.2 million;
- Equity ratio was 39%;

Other highlights:

- Unfavourable weather conditions affected the performance of a part of the Company's proprietary portfolio which amounted to 9.3 GWp and was some 13% below plan;
- First coupon payment by Photon Energy Investments N.V.;
- Acquisition of the first power plant in Australia;

Notes:

- All data quoted in this report refer to the current reporting period i.e. from 1 April until 30 June 2013, unless specified otherwise. There are no references to growth rate percentages comparing the results of the reporting period to those of the prior year comparable period as the entity was founded on June 1, 2012.
- The 26% levy is a retroactively introduced levy charged on the revenues generated by PV power plants in the Czech Republic connected to the grid in 2009 and 2010, payable in the years 2011 to 2013;
- Total Comprehensive Income (TCI) is the sum of the profit after taxes plus Other Comprehensive income (OCI) according to IAS 16. Other comprehensive income includes revaluation of PPE in a proprietary portfolio to their fair values, share on OCI of associates and joint ventures and foreign currency translation differences.
- For simplicity, throughout this report following separators were used: point "." for decimals, comma "," for thousand and million.
- Throughout this report Photon Energy Investments N.V. is referred to as the "Photon Energy Investments", "PE Investments", "the Issuer" or/and the "Company" along with its subsidiaries the "PE Investments Group".
- Photon Energy Investments N.V. is a company domiciled in Barbara Strozilaan 201, 1083 HN Amsterdam, Netherlands, registered in the local court under the number 55423515.

CONSOLIDATED FINANCIAL REPORT

2. MANAGEMENT DISCUSSION AND ANALYSIS

2.1. A note from the Management Board

Following the placement of our corporate bond in the first quarter, in Q2 2013 our Company embarked on the implementation of our strategy. After it became apparent that the regulatory regime in Romania had become unstable PEI together with the rest of the Photon Energy Group decided to discontinue its efforts in that market. Fortunately, this was possible without any financial losses for the Company.

In line with our stated focus, we entered the Australian market by acquiring our first power plant in April. The rooftop installation in Symonston has a capacity of 144 kWp and was – at the time of commissioning earlier this year – the largest power plant of its kind in the region. With its vast opportunities for off-grid solutions and grid-parity projects Australia will definitely play a pivotal role in our future expansion. PEI is evaluating an extensive pipeline of grid-parity projects following the Independent Power Producer model.

In Europe Q2 2013 saw the continuation of unusually unfavourable weather conditions, particularly in the Czech Republic and Slovakia. Low overall sunshine put a damper on energy production in Central Europe, leading to exceptionally low results of our power plants. Even our regular uptime exceeding 99%, thanks to our sister company Photon Energy Operations' best-in-class maintenance and monitoring services, was not enough to avoid shortfalls on a year-on-year comparison. As we write this introduction we are, however, glad to report, that in July our portfolio of power plants produced record amounts of energy and in August so far performance is equally satisfying.

In the Czech Republic – one of our core markets as far as our portfolio is concerned – politicians and the media continued their negative campaign against Renewable Energy and Solar Investors. In Q2 2013 the Czech Environment Ministry passed a directive under which owners of power plants have to register with a recycling system and pay a fee of CZK 8.50 (EUR 0,30) per kilogram. With the introduction of a fee far above market prices and comparable fees in other countries, the government's decision has aroused suspicion as to what the government's true intentions are. In reaction to the introduction of the recycling fee our sister company Photon Energy Operations and other leading players from the Czech PV Industry as well as the PV industry association CZEPHO have joined forces and founded REsolar. As a collective system of PV module recycling REsolar will look after the interests of owners of PV power plants, something the Czech state has failed to do in the past years. All of PEI's in the Czech Republic power plants were registered with REsolar by the 30 June 2013 deadline.

As if introducing a controversial recycling fee under suspicious circumstances had not been bad enough to tarnish the reputation of the Czech Republic, the government has set out to damage investor confidence even further. Following weeks of discussion, the Czech Republic broke previous promises and - shortly after the reporting period, on 16 August – Czech Parliament passed a bill limiting the support for Renewable Energy starting 1 January 2014 and simultaneously - in yet another retroactive measure - extending the Solar Levy for the remainder of the applicable Feed-in-Tariff period for PV plants connected in 2010 at the level of 10% of revenues (down from 26% for the years 2011 to 2013).

Considering this Bill and the energy production in 2011 and 2012, the lower Solar Levy would lead to an additional pre-tax cash flow of approximately EUR 1.25 million annually. On the other hand the Company would have to impair the value of its PV plants in the Czech Republic representing 14.2 MWp. This impairment would negatively affect the Company's Equity by approximately EUR 5.25 million. Before becoming Law this Bill will need to be approved by the Senate and signed by the Czech president. Photon Energy Group is working with industry representatives in the Czech Republic to convince members of the senate to strike the Bill down.

Financially, Q2 2013 was a successful period with consolidated revenues amounting to EUR 4.3 million. Despite below-plan production by 13% caused by bad weather, most of our revenue came from the sale of 9.3 GWh of PV-generated electricity. Higher production also meant that, compared to the previous quarter, the amount of 26% levy also increased accordingly and amounted to EUR 736 thousand. EBITDA increased by 913% compared to the previous quarter and amounted to EUR 3.251 million (EUR 3.987 million without the levy) whereas EBIT jumped from negative EUR 399 thousand to positive EUR 1,575 thousand (EUR 2.311 million without the levy). We can report a pre-tax profit of EUR 891 thousand, which without the 26% levy on the revenues of our Czech PV plants, would have been EUR 1,627 million. Total comprehensive income reached EUR 807 thousand and would have been EUR 1,543 million without the levy. Based on record energy production in July 2013 and a strong start into August we are looking forward to a positive Q3 2013.

The most important non-operational events in Q2 2013 that should be highlighted were: a) PEI's parent company Photon Energy N.V. listed on the NewConnect market of the Warsaw Stock Exchange, completed a capital increase by EUR 24 million and announced plans for IPO, b) the first coupon payment by Photon Energy Investments N.V. and c) the acquisition of the first power plant in Australia by PEI.

a) PEI's parent company Photon Energy N.V. listed on the NewConnect market of the Warsaw Stock Exchange, completed a capital increase by EUR 24 million and announced plans for IPO

On 4 June 2013 our parent company Photon Energy N.V. listed its shares on the NewConnect market of the Warsaw Stock Exchange. With this step the company concluded its restructuring process started in 2010, which transformed the company from a Czech PV system integrator to a global photovoltaic solutions provider headquartered in Amsterdam.

On 30 June 2013 the parent company Photon Energy N.V. executed a EUR 24 million capital increase substantially strengthening its balance sheet and laying the foundation for further capital increases, including a planned public offering and listing on the main market of the Warsaw Stock Exchange.

The management board of the parent company Photon Energy N.V. is evaluating various options for equity and debt financing, including but not limited to, a further capital increase by private placement, a public offer of shares in combination with a listing on the main market of the Warsaw Stock Exchange and a bond issue. If market conditions allow for it, the company is aiming at a public offering and main market listing by 2014 Q1.

b) First coupon payment by Photon Energy Investments

On 12 June 2013 PEI paid the first quarterly coupon for its 8% corporate bond. The bond was placed in March 2013 with a term of 5 years and an 8% p.a. coupon, paid quarterly. The bond (ISIN DE000A1HELE2) with a EUR 1,000 face value was placed in Germany, Austria, the Czech Republic, Slovakia and Poland and is currently listed on the Open Market of the Frankfurt Stock Exchange. Since its introduction to trading in March the price of the bond remained stable at around 100 per cent and currently stands above par value at 100.50 (end of June 2013).

c) Acquisition of the first power plant in Australia by Photon Energy Investments N.V.

In April 2013 PEI added its first Australian power plant, located in Symonston in the Australian Capital Territory, to its portfolio. Australia offers the highest average solar irradiation by square meter of any continent and has long been seen as an ideal market for solar power. The rooftop power plant, developed by its sister company Photon Energy Projects in Australia, was the largest rooftop installation in the region at the date of installation with an installed capacity of 144 kWp and had been already connected to the electricity grid in March 2013.

The project was acquired in line with the Company's low risk strategy based on entering new markets by first realising smaller pilot projects developed by on-location subsidiaries or project partners. Further Australian projects are in the pipeline.

2.2. Proprietary portfolio and generation

The table below presents the portfolio of power plants consolidated under Photon Energy Investments at the end of the reporting period i.e. as of 30 June 2013, consisted of 26 power plants in Czech Republic, Slovakia, Italy and Australia with the total installed capacity of 26.8 MWp.

Table 1. The proprietary portfolio of Photon Energy Investments N.V. as of 30 June 2013

Nr	Proprietary portfolio	Country	Cap.(kWp)	Share	Cap. Pro-rata	Completed
1	Komorovice	CZ	2 354	100%	2 354	Dec 2010

	Total	-	26 815	-	24 858	-

In the reporting period in April 2013 there was one major event, which resulted in a material change to the proprietary portfolio of the Issuer, namely the acquisition of the first power plant with an installed capacity of 144kWp located in Symonston in Australia.

The accumulated generation results of the proprietary power plants connected and feeding electricity to the grid in Q2 2013 amounted to 9.3 GWh, which is below the year-to-date forecast by 12.6% (and also 20.3% lower than in Q2 2012). Detailed generation results for each power plant are being published on a monthly basis in our monthly reports. The low results are due to unusually bad weather conditions in Central Europe.

Table 2. Generation results versus projections between 1 April and 30 June 2013

Project name	Capacity	Prod. Q2	Proj. Q2	Perf.	YTD Prod.	YTD Proj.	Perf.	YOY

Chart 1. Generation results and capacity growth between Jan 2012 - Jun 2013

2.3. Project pipeline

Photon Energy Projects, the Issuer’s affiliate, supports a number of projects in the development stage in markets that are of interest to PEI and which are referred to as the project pipeline. In particular, Photon Energy Projects currently develops projects that could be of interest for the company, depending on project size, financial resources and satisfactory Due Diligence.

Following the placement of the corporate bond in March 2013, the project pipeline is currently being adjusted according to the amount of funds raised in the placement. Following recent developments in the regulatory framework for Renewable Energy producers in the Romanian market, the management decided to discontinue its activities in this market and focuses on the other target markets Australia, Canada, USA and Turkey while other markets are being continuously analysed.

2.4. Financial statement analysis

Profit and Loss statement

The Group's revenues in Q2 2013 amounted to EUR 4,274 thousand. As the entity was founded on 1 June 2012, there is no corresponding full period for the previous year. The revenues in Q2 2013 reflect the seasonal impact of the weather conditions.

Costs of sales amounted to EUR 560 thousand in Q2 2013 and were mainly related to production related costs, such as operations, maintenance, cost of material and related services.

The Company recorded EBITDA of EUR 3,251 thousand and a net profit of EUR 832 thousand for Q2 2013.

Balance Sheet

Total fixed assets amounted to EUR 89,457 thousand at the end of Q2 2013, representing a contraction by 2 % compared to the end of the previous quarter. The main reason for the decrease is the regular depreciation charged on the value of assets.

The Group's current assets grew by EUR 479 thousand quarter-to-quarter to EUR 9,827 thousand, primarily caused by higher trade and other receivables.

Total equity attributable to shareholders increased by EUR 1,072 thousand on a quarter-to-quarter basis mainly as a result of revaluation of derivatives and better retained earnings position.

Cash Flow & Cash Position

The Company posted a positive operating cash flow of EUR 778 thousand in Q2 2013 and had a cash position of EUR 4,616 thousand at the end of the period.

CONSOLIDATED FINANCIAL REPORT

3. GROUP STRUCTURE

The following table presents the Group's structure (subsidiaries and joint-ventures) and the holding company's stake in the entities comprising the Group as of 30 June 2013.

	Name	% of share	% of votes	Country of regist.	Consolid. method	Legal Owner

Notes:

Country of registration

NL – the Netherlands

SK – Slovakia

CZ - the Czech Republic

IT – Italy

AUS - Australia

Consolidation method:

Full - Full Consolidation

In the reporting period, on 11 April 2013, Photon Energy Investments N.V. bought from its sister company Photon Energy Projects B.V. the entity Photon Energy AUS SPV 1 Pty. Ltd. (project Symonston) for AUD 3 thousand. This is the Australian first power plant in the proprietary portfolio of the Company with an installed of 144kWp. The rooftop plant, developed by Photon Energy Projects in Australia, is the largest rooftop installation in the region and was already ready to be connected in March 2013.

In addition to the above subsidiaries, for the purposes of **IFRS reporting**, the Company consolidates the following entities (these companies were consolidated until their sale, the figures as of 30.06.2013 contain proportionate part of their result):

	Name	% of Consolidated share	% of Ownership share	Country of registration	Consolidation method	Legal Owner
